KeyMacro is a password manager for Windows. KeyMacro makes it super easy to create strong, unique passwords by generating them randomly. Simple passwords without the use of numbers and special characters. Password masks to make your passwords stronger. Shows the currently active password. Password reminders to remind you to change your passwords. Keymacro is a feature-packed password manager. It is one of the few that will let you create a random strong password using letters, numbers, and special characters. The software's masks will further improve your password's security and make it more complex. KeyMacro will also remind you to change your passwords. There's even a reminder when it's time to change your passwords. The reminder will pop up when you start typing a new password. What sets KeyMacro apart from other password managers is the fact that it generates secure, random passwords. Other software, such as Roboform, generates very weak passwords that require inputting numbers and special characters. What makes KeyMacro a winner is the fact that it uses a random number generator, which generates secure passwords. Using masks is another way to create a secure password. Other password managers use the same system that other software uses to fill out your information. For example, you can input your e-mail and password as alpha numbers. However, when your computer is connected to the Internet, the mask becomes a password. All the username and password information is masked, and the only thing you can see is alpha numbers. That makes it much more difficult to break into your computer. KeyMacro's password mask system makes it very easy to create secure passwords. Using this system, you can use letters, numbers, and special characters. When you type a password, you will see the masked password. It is possible to change the password later on using only letters and numbers. This is 77a5ca646e
