----- To the
authors' knowledge, this is the
first comprehensive and recent
review on the etiology,
diagnosis, management, and
prevention of tennis elbow. Our
review focused solely on the
rate of incidence and
prevalence of tennis elbow,
which may not be generalizable

to other injuries. We did not include a search strategy for long-term care, follow-up or surgical management. The search and review of the literature was performed by a single reviewer. Only studies published in English were included. Literature published prior to 1992 was not included, which might have contributed to the observation that the incidence of tennis elbow is decreasing. Conclusion {#sectio

n14-2325967120915857 }

===== We hope our systematic review provides a starting point for future research in the field of tennis elbow. No studies on the pathophysiology of tennis elbow were found. Extensive research is needed to identify risk factors and to identify effective prevention and intervention strategies. Final revision submitted December 24, 2019; accepted January 7, 2020. One

or more of the authors has declared the following potential conflict of interest or source of funding: This work was supported by the Maryland Strength and Conditioning Association. AOSSM checks author disclosures against the Open Payments Database (OPD). AOSSM has not conducted an independent investigation on the OPD and disclaims any liability or responsibility relating thereto.
